Re: Remedial Investigation Report, Administrative Order on Consent, Docket No. 92 13, Del Amo Superfund Site

Dear George

EPA has reviewed the document entitled “Remedial Investigation Report, Soil and NAPL Operable Unit, Del Amo Superfund Site, Los Angeles, California,” dated June 28, 2007. This document constitutes the final Remedial Investigation report, required pursuant to the Administrative Order on Consent, Addendum to Attachment B – Schedule of Deliverables. This document is approved with the condition that you submit a paper version of Appendix D “Parcel-by-Parcel Data Summary” as soon as possible. Appendix D is currently provided on a CD only.

Thank you very much for all your hard work on this very lengthy remedial investigation. This final document is the culmination of 15 years worth of investigations and reporting that began in 1992. Special thanks to Erich Weaver, Principal Investigator for URS, and to John Dudley, the URS Project Manager, who both did an outstanding job in working through all the details and issues with EPA. EPA looks forward to working with the Respondents and their technical team on the feasibility study for the Soil & NAPL OU at the Del Amo Superfund site.

Sincerely,

Dante Rodriguez, P.E.
Remedial Project Manager
U.S. EPA Region 9
