Dear Mr. Thomas,

I received your e-mails regarding information about the Pacific Gateway Business Park and the Del Amo Superfund site. The U.S. Environmental Protection Agency (US EPA) is the lead agency for this project, as well as the Montrose Chemicals Superfund site on Normandie Avenue. The project manager for the Del Amo site is Mr. Dante Rodriguez. He can be reached at (415) 972-3166. US EPA has historically been the agency to contact property and business owners within the Pacific Gateway Business Park, as well as residents in the neighboring area. I have requested that US EPA verify when and with whom they have had contact with property and business owners in the business park in the past. I am aware of some indoor air monitoring that was conducted in several buildings, and they will be locating that information for you. U.S. EPA also conducted soil gas sampling in the business park and these reports are available at our office, the Department of Toxic Substances Control, located at 5796 Corporate Avenue, Cypress, CA. To schedule an appointment to view documents please call Ms. Julie Johnson at DTSC, (714) 484-5337. Also, the information repository at the Torrance Library should have many of the same reports (many on microfilm). Their address is 3301 Torrance Blvd, Torrance Civic Center.

Additionally, if you feel that any air emissions from the facility that you worked at are not in compliance with current regulations, you can contact the South Coast Air Quality Management District at 1-800-cut-smog, or visit their website at www.aqmd.gov and file a complaint under the smoke and odor complaints icon. The website answers pertinent questions regarding the complaint process.

For worker exposure concerns you can also contact Cal OSHA at their website: www.dir.ca.gov/occupational_safety.html

In addition I am copying Mr. Rodriguez with your inquiries and this response.
